

Accuracy against an independent ground truth

Zheng et al. 2020 *E. coli* K-12, 16 growth media ($\lambda = 0.40\text{--}1.72\text{ h}^{-1}$). Pilea at its shipped defaults returns no estimate below 10x; at 0.5x with gates off it returns PTR = 1.0 for every sample, so neither has a defined correlation there.
