

Multi-strain communities: 16 reference genomes, 4/8/16 strains per sample, V-shaped profiles, $\log_2 \text{PTR} \sim \mathcal{U}[0,2]$. Recall and RMSE must be read together — Pilea at its shipped defaults earns a flattering RMSE by answering only 22% of cases, the easiest ones. sk2bGrow answers every case; cost crosses over at 4x, below which it is the cheaper of the two arms that answer.
